# TENNIS ELBOW

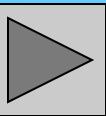

The injured players had significantly greater activity for the wrist extensors and pronator teres muscles during ball impact and early follow-through and excessive tension on the deep aponeurosis of the carpal and digital extensors .Novice subjects struck the ball with the wrist flexed about 13 degrees,while moving their wrists further into flexion and eccentrically contract their wrist extensor muscles throughout the stroke.In the backhand tennis stroke extensor carpi radialis brevis contract himself eccentrically as a result of racquet-ball impact ,has over-exertion and the tendon suffer frictions during the movements combined of the forearm in pronation , extension with in partnership bending of the wrist Clin Sports Med. 1995 Jan; 14(1): 47-57. The biomechanics of tennis elbow. An integrated approach.Roetert EP, Brody H, Dillman CJ, Groppel JL, Schultheis JM.United States Tennis Association, Key Biscayne, Florida, USA.

## Staffetta (4x100) stile libero

Swimming is an excellent sport for people of all age groups but can produce **overuse injuries**. Early diagnosis is essential before the resistant stage is reached: a swimmer with shoulder pain cannot 'swim it out'. Swimmers have different tolerances to high levels of activity but injuries can be reduced if attention is paid to technique, preliminary warm up and stretching exercises.

Aust Fam Physician. 1984 Jul; 13(7): 499-502. Swimmers' injuries.McLean ID.

# CASISTICA

## SUBJECTS AND METHODS

**60 athletes among which , swimmers, canoeists, tennis players and apprentices tambourine e squash and 1musician, from 27 to 45 years old average of 39.4 years ,36 males and 24 females**

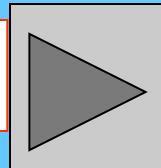

**tendinite-entesite dell'Estensore Comune Dita e dell'Estensore Radiale Breve Carpo con sintomatologia datante da almeno 3 mesi ecograficamente diagnosticate, 80 % lato dominante**

**Non inflammatory angiofibroblastic tendinosis.**

**80%tennis elbow on the dominant side**

**Controlli a 10-30-60 e 90 giorni**

**I pazienti erano tenuti a riposo funzionale per 2 settimane**

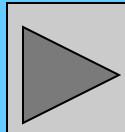

# **VERIFICA dei PARAMETRI**

soprattutto quelli legati al trasferimento di energia al paziente:

Sono stati monitorati i seguenti parametri:

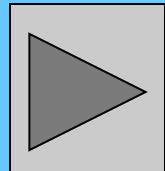

1. Per la **sorgente laser** è stata misurata la potenza del fascio laser sulla pelle (Watt)
2. Per la **crioterapia** è stata misurata la temperatura del flusso d'aria fredda al suo centro e alla distanza di 3 cm dall'ugello
3. Per l' **ultrasuono** non è stato possibile fare una misura della potenza ultrasonica emessa.La misura indiretta della corrente di risonanza convertibile in potenza utilizzando le tabelle di conversione della piezotite sono state giudicate troppo imprecise.

La **scelta dei protocolli** per le tre terapie è stata concordata in sede di policentrica nel rispetto delle indicazioni date dai costruttori e dalle indicazioni suggerite dal trattato di Medicina Fisica e Riabilitazione della UTET a cura di Giorgio Valobra Volume 2 ediz. 2000.

In particolare per il protocollo relativo al laser ad alta energia è stato **approvato dalla I.A.L.T.**

# METODO di VALUTAZIONE

**ANAMNESI e ESAME OBBIETTIVO e STRUMENTALE**

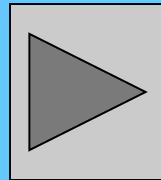

**SCALA del DOLORE:V.A.S.**

**FORZA della PRESA PALMARE**

**FLESSO-ESTENSIONE del GOMITO CON isocinetica a 60 - 180 °**

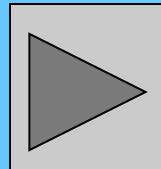

# **ESAME OBIETTIVO E ANAMNESI**

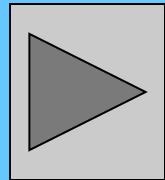

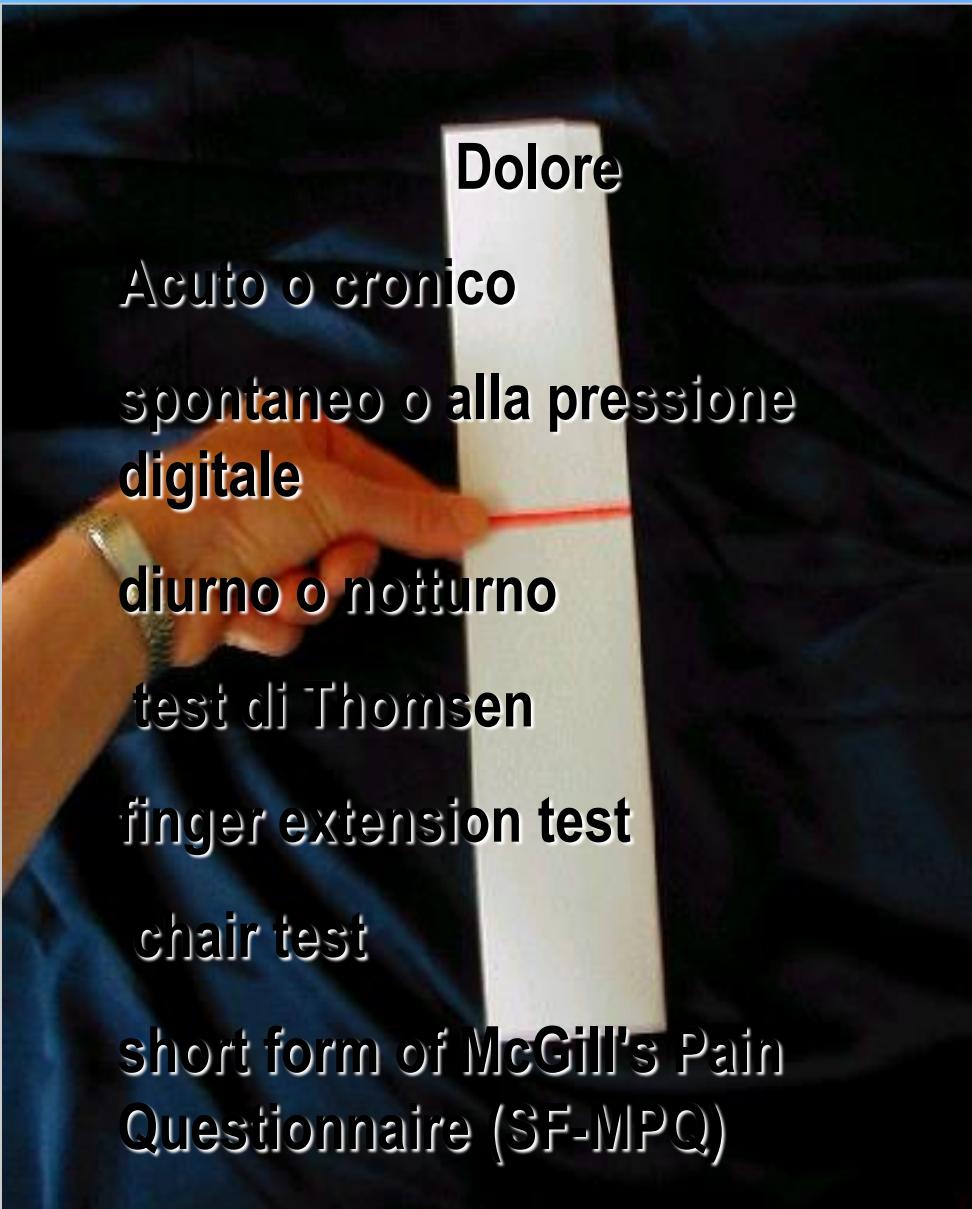

**Lassità congenite**

**Recidive con precedenti trattamenti**

**Sport e livello agonistico**

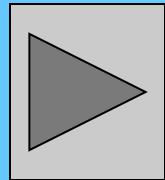

# **LEVEL of PAIN**

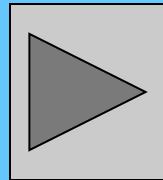

# GRIP STRENGTH

## With hand dynamometer

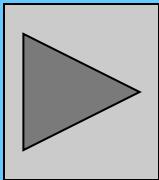

# VALUTAZIONE e ALLENAMENTO ISOCINETICO

# Protocols

areas of elbow abnormality are specific, including the ECRB-EDC complex laterally, the pronator teres, flexor carpi radialis medially, and triceps posteriorly.

# **Cold Air t –30°**

- Trattamento di breve durata

T < 3 min

- Portata di flusso 200 lt/min (4)

- Distanza : 2 - 3 cm con ugello 0,5 cm Ø  
fino a ottenere vasocostrizione o dolore  
urente

- 10 sedute di ≈3 min , da ripetere 3 volte

- 5 alla settimana

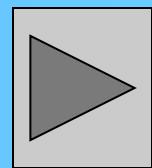

**Local decrease in free nerve ending sensitivity** The analgetic effect of cold air stream is superior to ice bag and cold N<sub>2</sub> –gas for local cooling of joint tissue

**Increases the threshold for nerve firing** Soon after application, the elevated pain thresholds partially decrease again, presumably related to the local microcircle

**Slows synaptic activity**

**Allows disruption of pain-spasm-pain cycle via analgesia**

# ULTRASONOTERAPIA

$\delta P = 2 \text{ W/cm}^2$

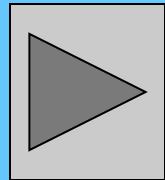

a massaggio sulla  
zona algica

modalità di emissione  
continua

10 sedute di 10 min

5 alla settimana

FREQUENZA DI  
OSCILLAZIONE della  
testina 1 MHz

# LASER THERAPY

## TRIGGER POINTS (TPs)

Alte densità di potenza sul paziente

qualche Watt/cm<sup>2</sup> (da 2 a 4 W/cm<sup>2</sup>)

Fino a raggiungere

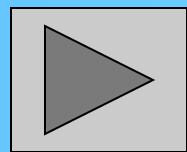

la soglia termica in pochi secondi

T.S.T. di circa 6-8 sec

per i punti trigger miofasciali

densità di energia trasferite

da 40 a 60 Joule/cm<sup>2</sup>

# **SCANNER**

**DIAMETRO del Fascio LASER  $\Phi_f = 2,0 \text{ cm}$**

**AREA del Fascio LASER ( $A_f = 3,5 \text{ cm}^2$ )**

**POTENZA del Fascio LASER**

**$P = 10,0 \text{ Watt}$**

**$\delta P = 3W /cm^2$**

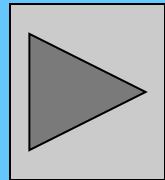

**$\delta E = 120J/cm^2$**

**MODALITA' trattamento : scansione manuale**

**MODALITA' di emissione : CW**

**AREA da TRATTARE: variabile da soggetto a soggetto**

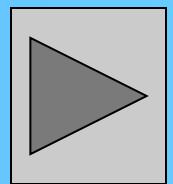

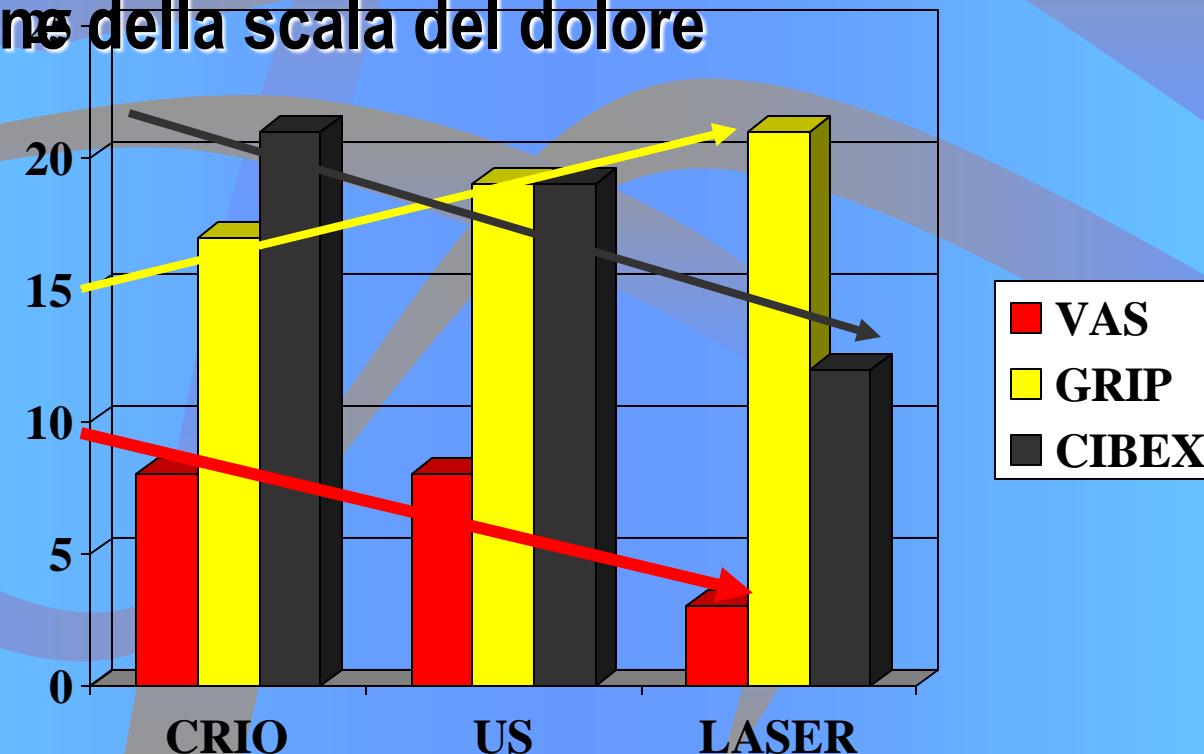

**10 sedute , 5 alla settimana**

# Risultati dopo 2 settimane di terapie fisiche

E' stata valutata la media aritmetica dei risultati sui singoli pazienti, scartati il risultato peggiore e il migliore relativo a:

1. Forza palmare
2. Valutazione isocinetica alla flesso-estensione
3. Valutazione della scala del dolore

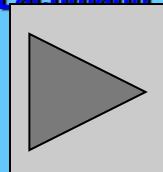

# **PHYSIOTHERAPY**

## **rehabilitative resistance exercise with progression**

**Valutiamo, a questo punto, la biomeccanica articolare di polso, gomito, e spalla ricordando che ogni restrizione funzionale a questi livelli può essere la causa predisponente dell'insorgenza e del mantenimento della patologia stessa, effettueremo ogni normalizzazione necessaria al ripristino della corretta funzionalità dell'arto superiore attraverso tecniche manuali e strumentali**

**We appraise, to this point, the articular biomechanics of wrist, elbow, and shoulder remembering that every functional restriction to these levels can be the cause predisponente of the onset and the maintenance of the same pathology, we will effect every necessary normalization to the restoration of the correct functionality of the superior limb through manual and strumental techniques**

# Elbow Rehabilitation Protocol

## Wrist Extension Stretch

1. Hold wrist as shown
2. Bend the wrist until you feel a stretch
3. Hold for 8 to 10 seconds
4. Repeat this stretch 10 times

## Wrist Flexion Stretch

1. Hold wrist as shown
2. Bend the wrist until you feel a stretch
3. Hold for 8 to 10 seconds
4. Repeat this stretch 10 times

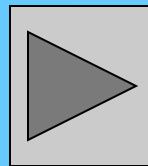

## Wrist Extension

1. Sit with arm supported as shown
2. Hold \_\_\_\_ lb weight in hand
3. Curl wrist slowly upward
4. Hold for 8 to 10 seconds, then lower slowly
5. Complete exercise for 3 sets of 10 repetitions

## Wrist Flexion

1. Sit with arm supported as shown
2. Hold \_\_\_\_ lb weight in hand
3. Curl wrist slowly upward
4. Hold for 8 to 10 seconds, then slowly lower wrist
5. Complete exercise for 3 sets of 10 repetitions

## Pronation

1. Support arm on table
2. Hold weight (PVC, hammer, or dumbbell) in hand as shown
3. The further out you hold the weight the harder the exercise
4. Let the weight turn your palm face down
5. Hold there for 5 seconds
6. Slowly bring the weight to an upright 90 degree position
7. Repeat exercise for 3 sets of 10 repetition

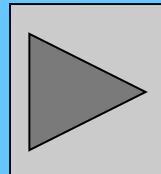

## Supination

1. Support arm on table
2. Hold weight (PVC, hammer, or dumbbell) in hand as shown
3. The further out you hold the weight the harder the exercise
4. Let the weight turn your palm face up
5. Hold there for 5 seconds
6. Slowly bring the weight to an upright 90 degree position
7. Repeat exercise for 3 sets of 10 repetition

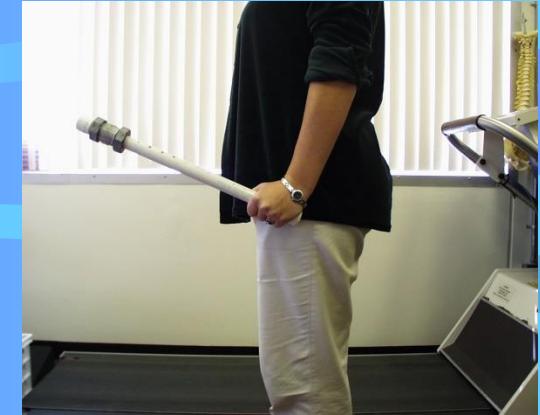

## Gripping

1. Hold a stress ball, a racquet ball, or something soft in your hand as shown
2. Squeeze as firmly as you can
3. Hold for 5 second
4. Repeat exercise for 3 sets of 10 repetitions

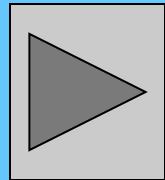

## **Radial Deviation**

- 1. Stand holding a weight (PVC, hammer, dumbbell)**
- 2. The further out you hold the object, the harder the exercise**
- 3. Raise weight upward as shown in pictures**
- 4. Hold for 5 seconds and then lower slowly**
- 5. Repeat exercise for 3 sets of 10 repetitions**

## **Ulnar Deviation**

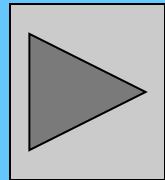

- 1. Stand holding a weight (PVC, hammer, dumbbell)**
- 2. The further out you hold the object, the harder the exercise**
- 3. Raise weight upward as shown in pictures**
- 4. Hold for 5 seconds and then lower slowly**
- 5. Repeat exercise for 3 sets of 10 repetitions**

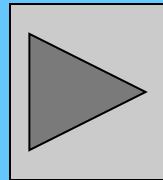

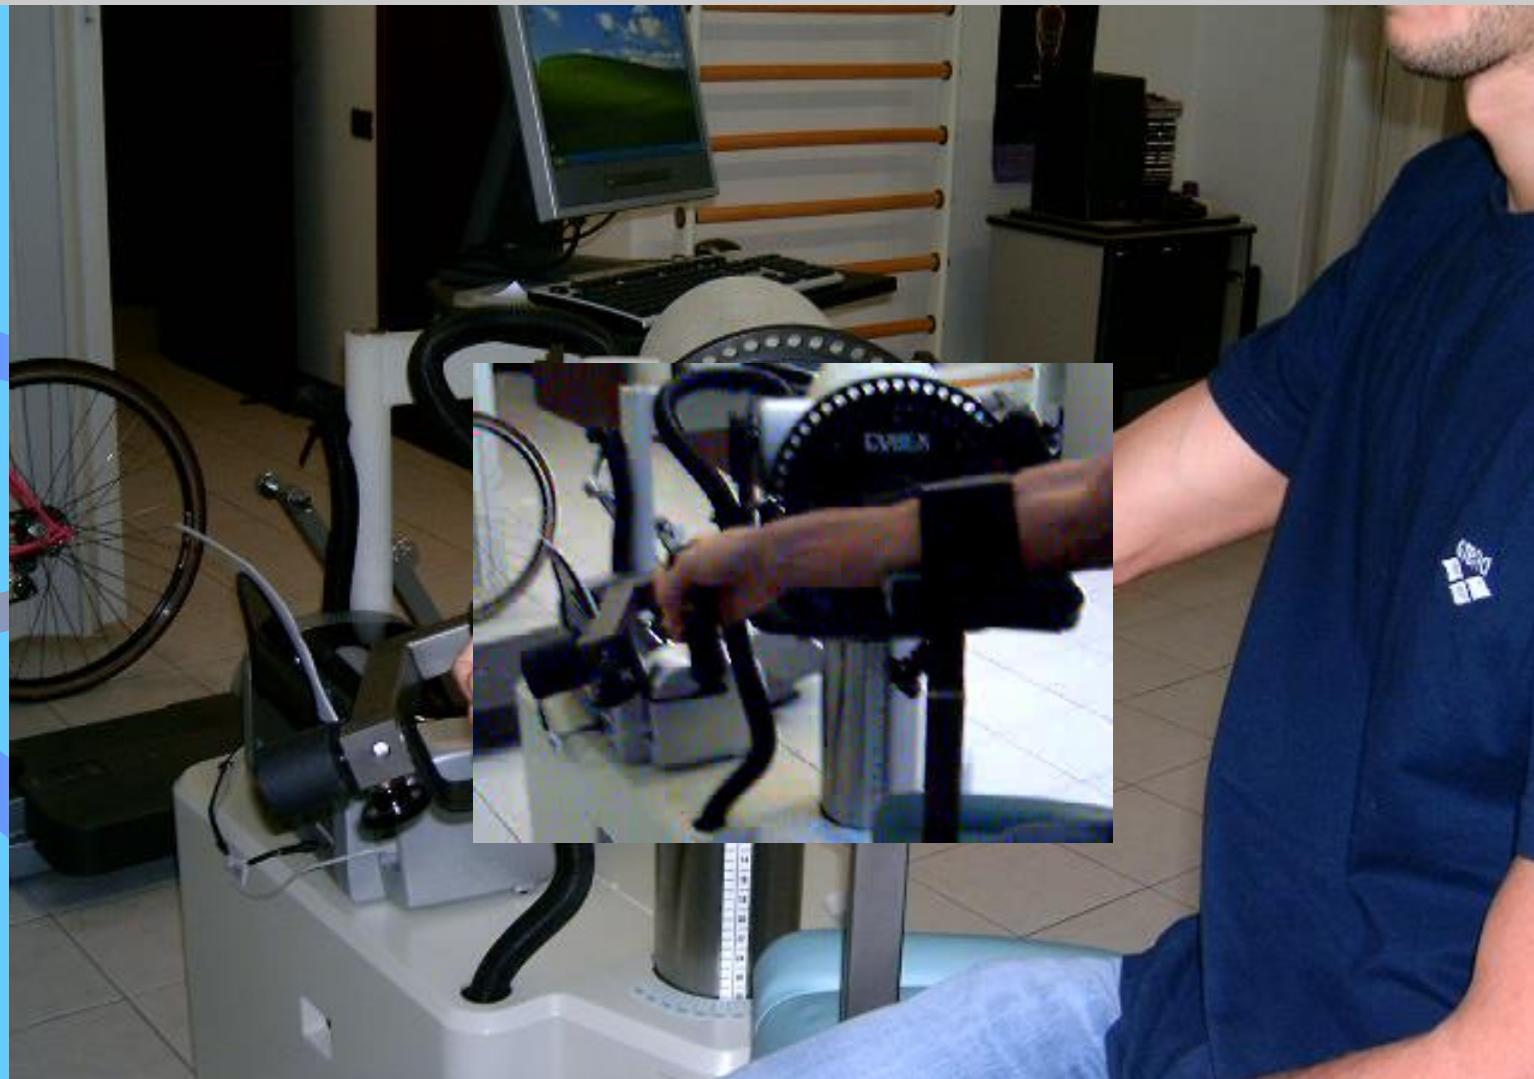

# Esercitazioni con CARRUCOLA ,ELASTICI,PALLA

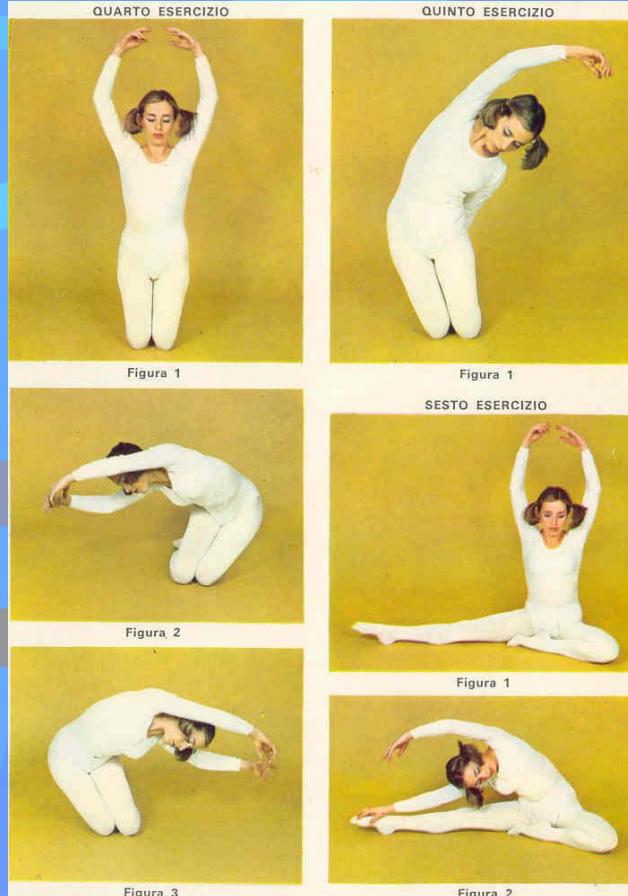

Aumentando pesi,resistenza  
e velocità .....dalla catena  
cinetica chiusa alla aperta.....  
Fino alla ripresa del gesto atletico

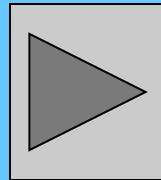

**ALLENAMENTO ISOCINETICO anche di adduzione abduzione  
polso,ecc.....e movimenti di adduzione flessione intrarotazione –abduzione  
estensione extrarotazione della spalla**

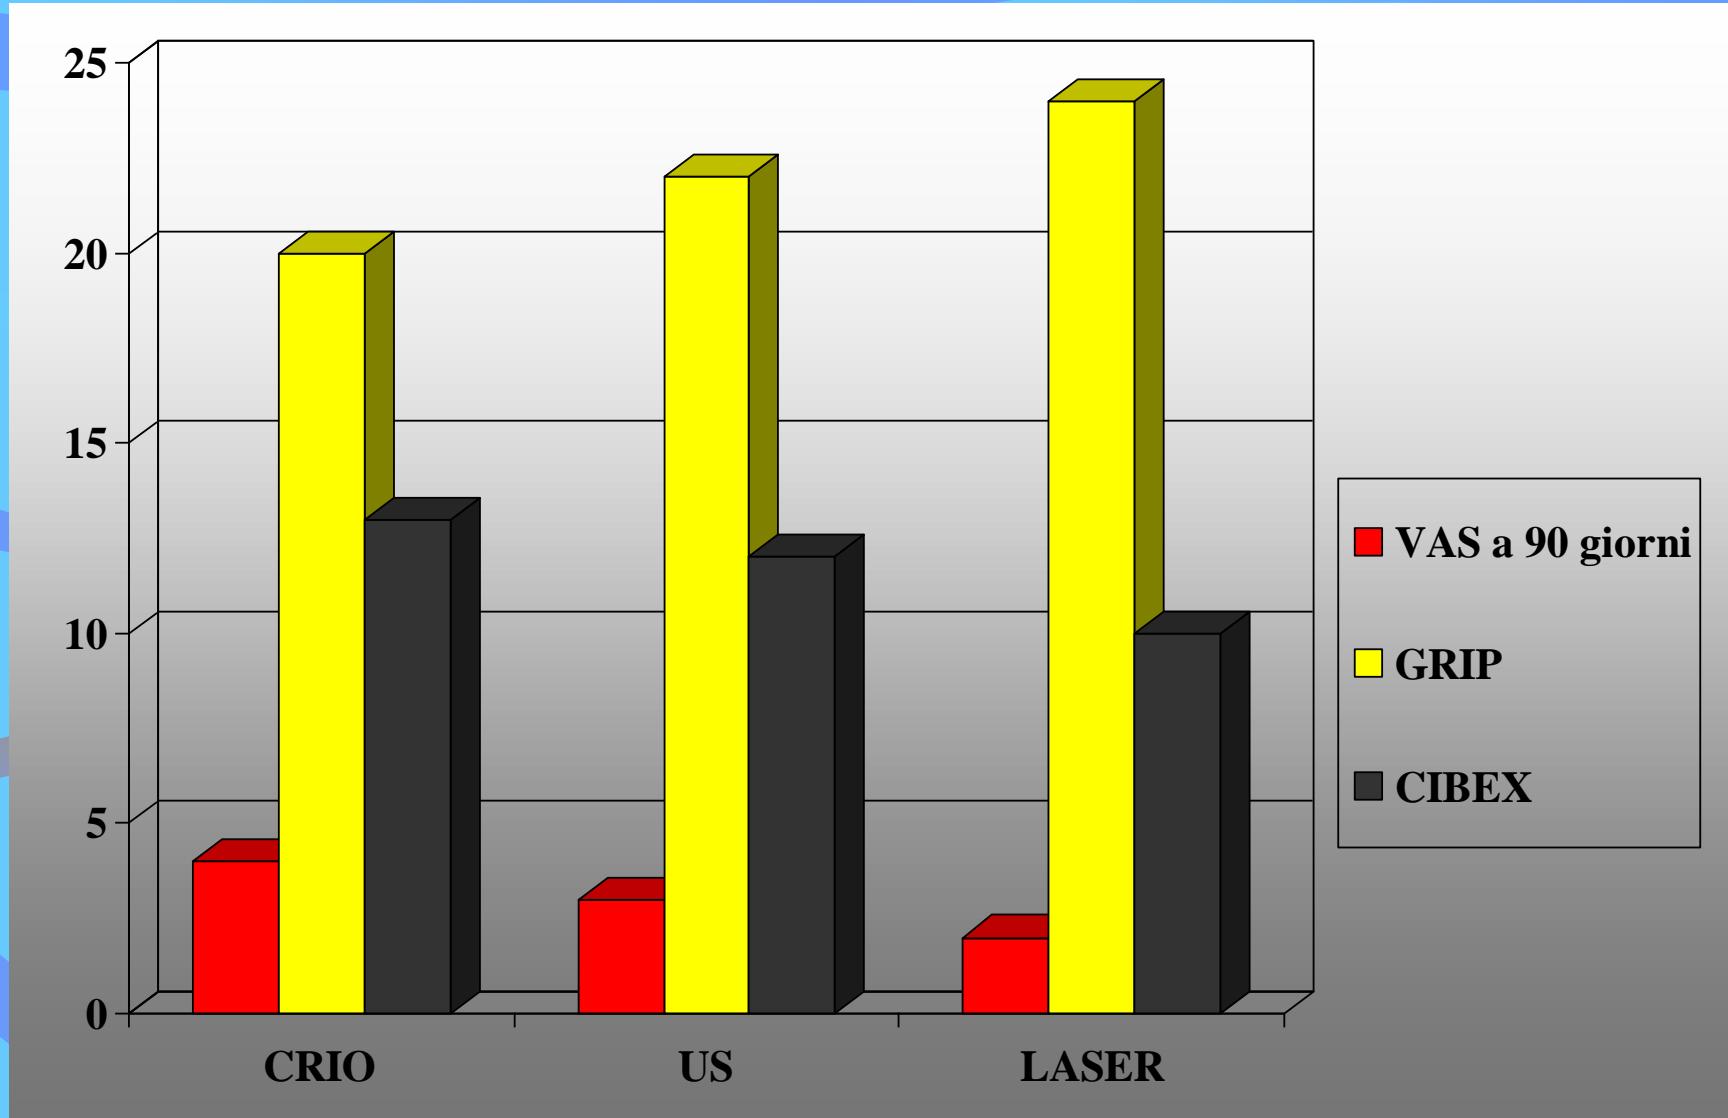

# Transversus Abdominis muscle

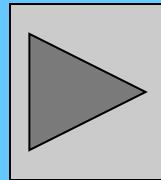

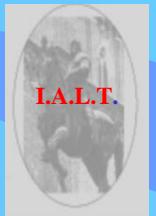

Although this muscle is not considered to be paraspinal, it has particularly important implications in the maintenance of spinal stability

**CONTROLLI LONGITUDINALI a 30 60 90 GIORNI**

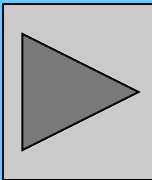

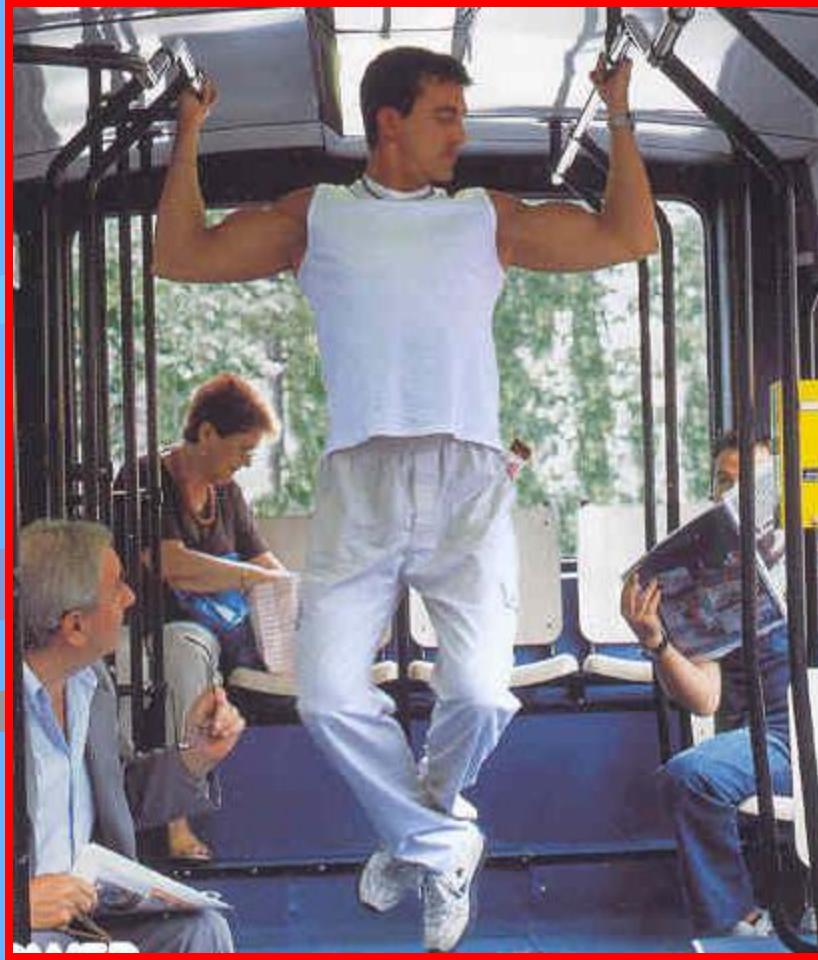

# CONCLUSIONI

E' stata valutata la media aritmetica dei risultati sui singoli pazienti, scartati il risultato peggiore e il migliore su : forza palmare, valutazione isocinetica della flesso-estensione del gomito e VAS. **L'effetto biostimolante della laserterapia innesca attivazione dei processi di guarigione del tessuto dolente e questo supporta il dato che i risultati erano più rapidi e stabili.**

La crioterapia sembra utile nel paziente in condizioni acute, applicando il getto d'aria per pochi minuti, e, se ritenuto necessario applicando **un bendaggio** che limiti le escursioni articolari più dannose.

**Per avere stabilità di risultati occorre anche un valido programma riabilitativo con uso anche di potenziamento isocinetica eccentrico**

Grazie !!
